VE Velvet Etch
40% PHOSPHORIC ACID ETCH GEL

"Velvet Etch is the new benchmark for phosphoric acid etchants, because research shows that etching a tooth is critical to achieve the best bond, and, ultimately, a successful long-lasting restoration. Velvet Etch 40% phosphoric acid etchant with its royal purple color and rich viscosity allows for accurate placement during total or selective etching techniques, and easy, no-hassle removal when rinsed. Treat yourself to a better experience, you deserve it."

- Dr. Michael Miyasaki

THE ROYAL TREATMENT

Velvet Etch 40% Phosphoric Acid Etchant is the ideal solution for etching dentin and enamel. The smooth consistency and viscosity provide for easy and precise placement. Works great for total etching techniques and is the obvious choice for selective etch techniques. Velvet Etch is easy to place and stays where you put it.

Velvet Etch

12 x 1.2mL syringes, 75 x 22ga -pre-bent tips	\$49.50

Vista Apex offers a full suite of etchants to meet every need

Clean & Boost® Liquid

Ideal for etching prior to placing Pit & Fissure Sealants

Clean & Boost® Gel

Ideal viscosity for use prior to resin bonding

Best Etch™

Ideal for every day total etching technique

Velvet Etch

Ideal for both total etch and selective etch techniques

FAQ's

Q Can Vista Apex etchants penetrate occlusal grooves?

A Yes, Vista Apex etchants are able to reach the smallest fissures.

Q Do Vista Apex etchants contain glycerin?

A No, our etchants do not contain glycerin.

Q Can Vista Apex etchants be used on both dentin and enamel?

A Yes, our etchants are designed for use on both dentin and enamel.

Q How long should I leave the etchant on the tooth?

A We recommend 15 – 30 seconds on enamel and 10 – 15 seconds on dentin.
