Quick-Stat™ Liquid

317120-2	Quick-Stat™ Liquid 30mL Bottle
	• 1 x 30mL Bottle
504155-2	Quick-Stat™ Liquid 30mL Bulk Syringe
	• 1 x 30mL Liquid Bulk Syringe

Stat-Pak™ Knitted Retraction Cord is used to retract sulcular tissue, protect tissues and arrest sulcular fluid seepage. With compressible, interlocking chains, knitted Stat-Pak™ Dental Retraction Cord carries more hemostatic agent to the sulcus and remains in-situ, even when touched by a bur or diamond. Stat-Pak™ knitted retraction cord expands after packing, conforming to sulcular anatomy and is memory free for easy placement and precision.
Each bottle contains 100 in (245 cm)

SIZE / COLOR:

	• 72 in (176 cm) 1 - White Stat-Pak™ Cord + E

Vista-Pak™ Packers have a thin design — ideal for placing knitted retraction cords.
• Plain edge: to place and compress cord
• Serrated edge: for ease of use with knitted cord
Comes in Standard and Circlet Styles
• Circlet style has 3 packing sides for more efficient circular packing of the prep

Technique

STEP 1

Scrub the hemostatic agent firmly against the sulcus until bleeding is controlled.
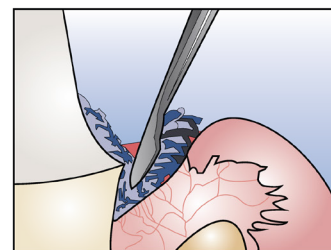

STEP 2

A tip with a padded end allows for gentle pressure to be applied, allowing hemostatic agent to penetrate cut capillaries.

STEP 3

Use air/water to remove coagulum. If bleeding persists, repeat application.

STEP 4

Once complete hemostasis has been achieved, use **Stat-Pak™** retraction cord for tissue displacement.

Quick-Stat™ FREE

Quick-Stat™ FREE is the first clear hemostatic agent with shortened hemostasis time. Metal ions in hemostatic agents cause the precipitation of proteins. The positively charged metal ions bind with the negative charge of the blood/serum proteins and you get coagulation because the denatured proteins help accumulate platelets and fibrinogen to speed up clot formation. Not only that, the proprietary surfactant in Quick-Stat™ FREE allows better penetration to more effectively plug cut capillaries. This is the Astringent Hybrid Technology that makes Quick-Stat™ FREE 20% faster than other clear hemostatic agents. For controlling bleeding, especially in the aesthetic zone, Quick-Stat™ FREE is the clear choice. *Compare to Ultradent®*: ViscoStat®* Clear*

504600-2	**Quick Stat™ FREE Standard Kit** • 4 x 1.2mL Prefilled Syringes • 8 x Stat-Flo™ Tips
504640-2	**Quick-Stat™ FREE Value Pack** • 10 x 1.2mL Prefilled Syringes • 50 x Stat-Flo™ Tips

Quick-Stat™ Gel

Our **Quick-Stat™ Gel** is a highly effective 20% ferric sulfate gel used for immediate and profound control of bleeding. This gel works on both hard and soft tissue and is highly effective for the control of bleeding during impressions, restorations, and crown and bridge procedures. Quick-Stat™ Gel will not flow onto surrounding tissue and quickly controls bleeding. Delivered with Stat-Flo™ applicator tips, this hemostatic agent is easy to use and incredibly effective. *Compare to Ultradent®*: ViscoStat®**
